Add split cooling engine: 1555.00

Controls

June 2011 **BY THE GLASS** Sizes

What makes **BY THE GLASS SUPERIOR** to other popular DISPENSING SYSTEMS on the market today:

- **Flexible Climate Zones (patented)**

The partition wall for all dispensers with 8 bottles or more can be moved to the left or right easily to change the ratio between the number of red and white wines.

- **Capacity for 2 Bottles per Position**

Behind the bottle in use is enough space to place the next bottle. When it's busy and a bottle runs empty, the next bottle is at hand at the proper temperature. Staff does not have to seek a new bottle and no additional wine cabinet is needed to pre-cool the next bottle.

- **Excellent Cooling Capacity**

This is the point where other dispensing systems struggle. There are two zones which can be moved to accommodate your selection of whites and reds by the glass. You also have the option to cool all whites or serve all reds. The unit is the most flexible on the market today and works with both your summer and winter menus. The cold section cools between 4C-20C and the warm section holds between 15C-25C.

- **Optional: Separate Cooling Engine**

The cooling engine can be separated from the wine dispenser and can be set apart from the wine cabinet. The advantages are threefold: (1) less space needed, (2) no sound behind the bar and (3) no warm air behind the bar. In some cases it is possible to attach the dispenser to existing cooling engines or add your own compressor and condenser.

- **Optional: Different Materials and Colours**

The Stainless model is available in many different RAL colours (e.g. the "Black Edition!" which has been extremely popular). We can quote on wooden panels which are made of oak and are also available in different colours. There is a wine dispenser for every interior!
